

Self-Service Guest Park

Digital easiness for guests and parking enforcement

Easy, controlled and profitable guest parking at your real-estate

- Self-service Guestpark can be utilised in affordable office hotels, great business parks, head-quarters, research centers, big restaurants, hospitals, sports venues etc. offering short-term visitor parking, when parking opportunities in the surrounding neighbourhoods are scarce
- No sensors nor gates, not to mention pay stations are needed. Only signs at the parking lot.
- Hosts in tenant companies can send a parking invitation to their guests that guides them to the correct parking lot and to start their parking with SS-Guest park.
- In case there is no receptionist guests can announce their license plate in the SS-Guestpark interface.
- The enforcement staff is needed. They can see the list of allowed cars directly on their mobile devices, so they can operate also outside office hours.
- Parking facility using SS-Guest park can be payable or free of charge. Tariffs can be changed easily.
- The real-estate will get reliable statistics of visitor parking.
