

Service Guest Park

Digital easiness for visitors, receptionists and parking enforcement

No more running between reception and car with paper notes

- Guestpark can be utilised in office hotels, business parks, head-quarters, research centers, big restaurants, hospitals, sports venues etc. offering short-term visitor parking, when parking opportunities in the surrounding neighbourhoods are scarce
- In case your visitors now need to bring a physical parking permit from a reception back to their parked car, this madness can be now forgotten
 - No sensors nor gates, not to mention pay stations are needed
 - The receptionist simply asks the license plate of the visitor and write it into the Guestpark interface. That's it!
 - In case the parking enforcement staff still need to wait for a receptionist (having other errands, doors already closed) to get the paper list of permitted license plates, this nuisance can be now forgotten.
 - The enforcement staff see the list directly on their mobile devices, so they do not need to bother the receptionist at all. They can even operate outside office hours.
 - The real-estate will get reliable statistics of visitor parking.
